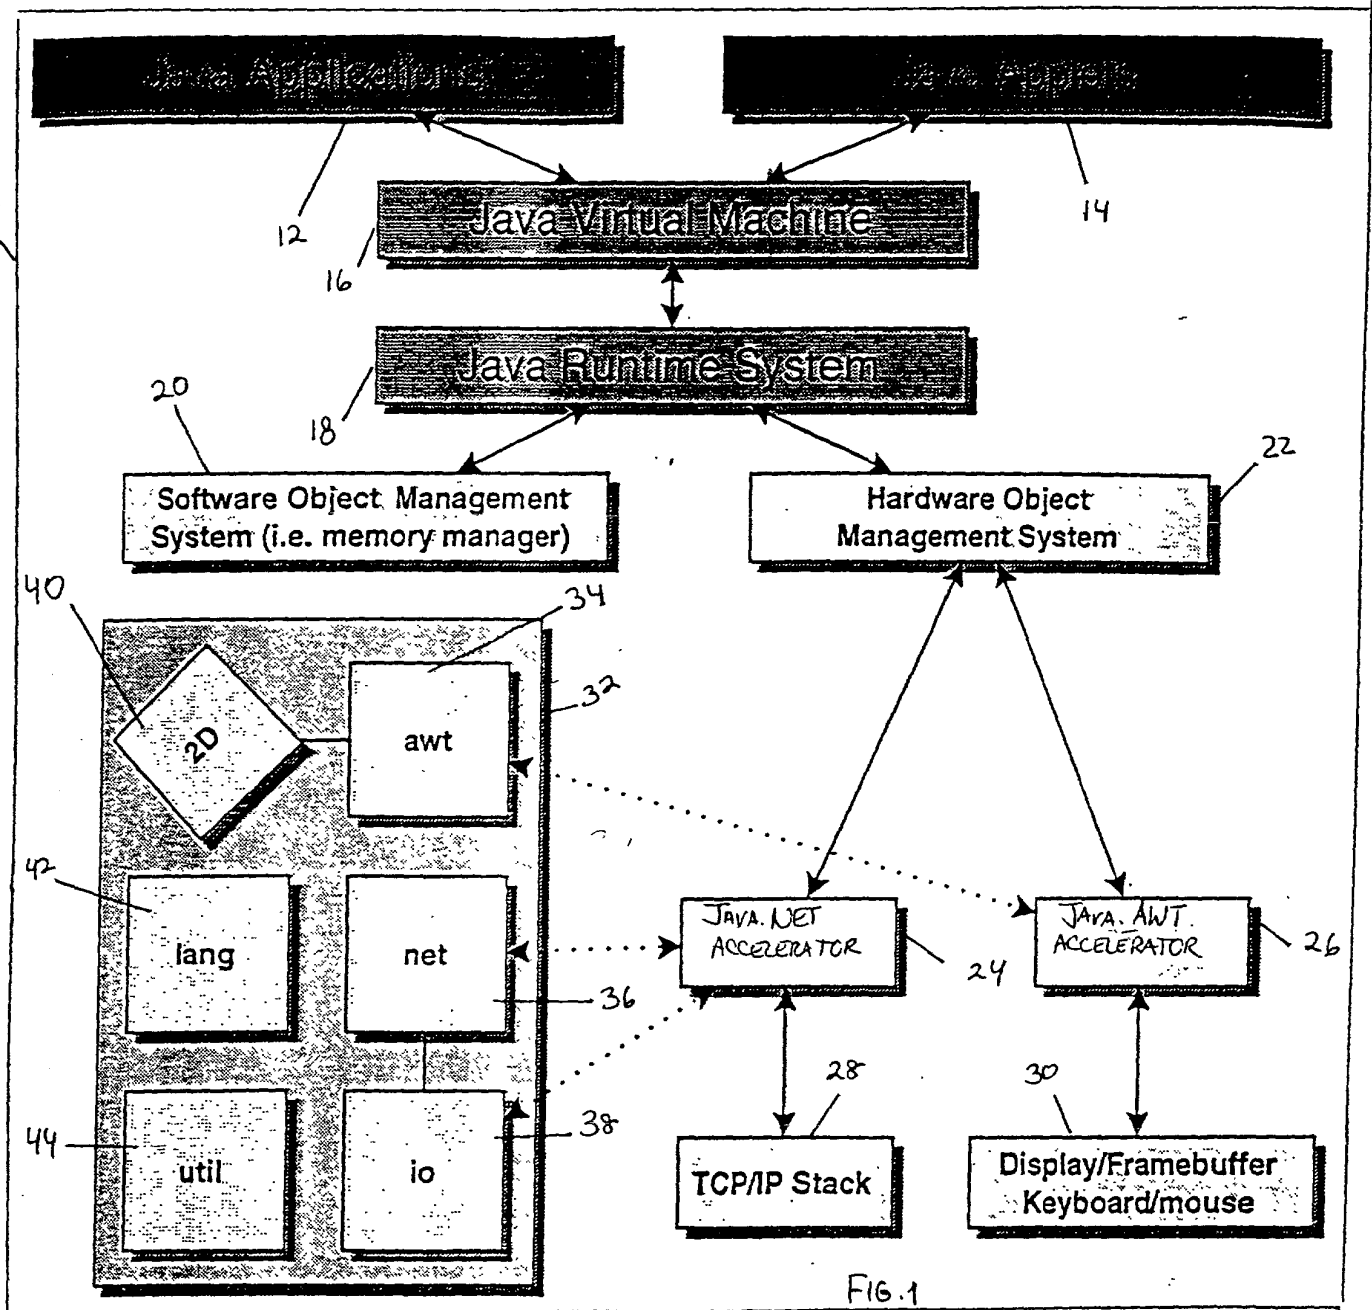

FIG. 2

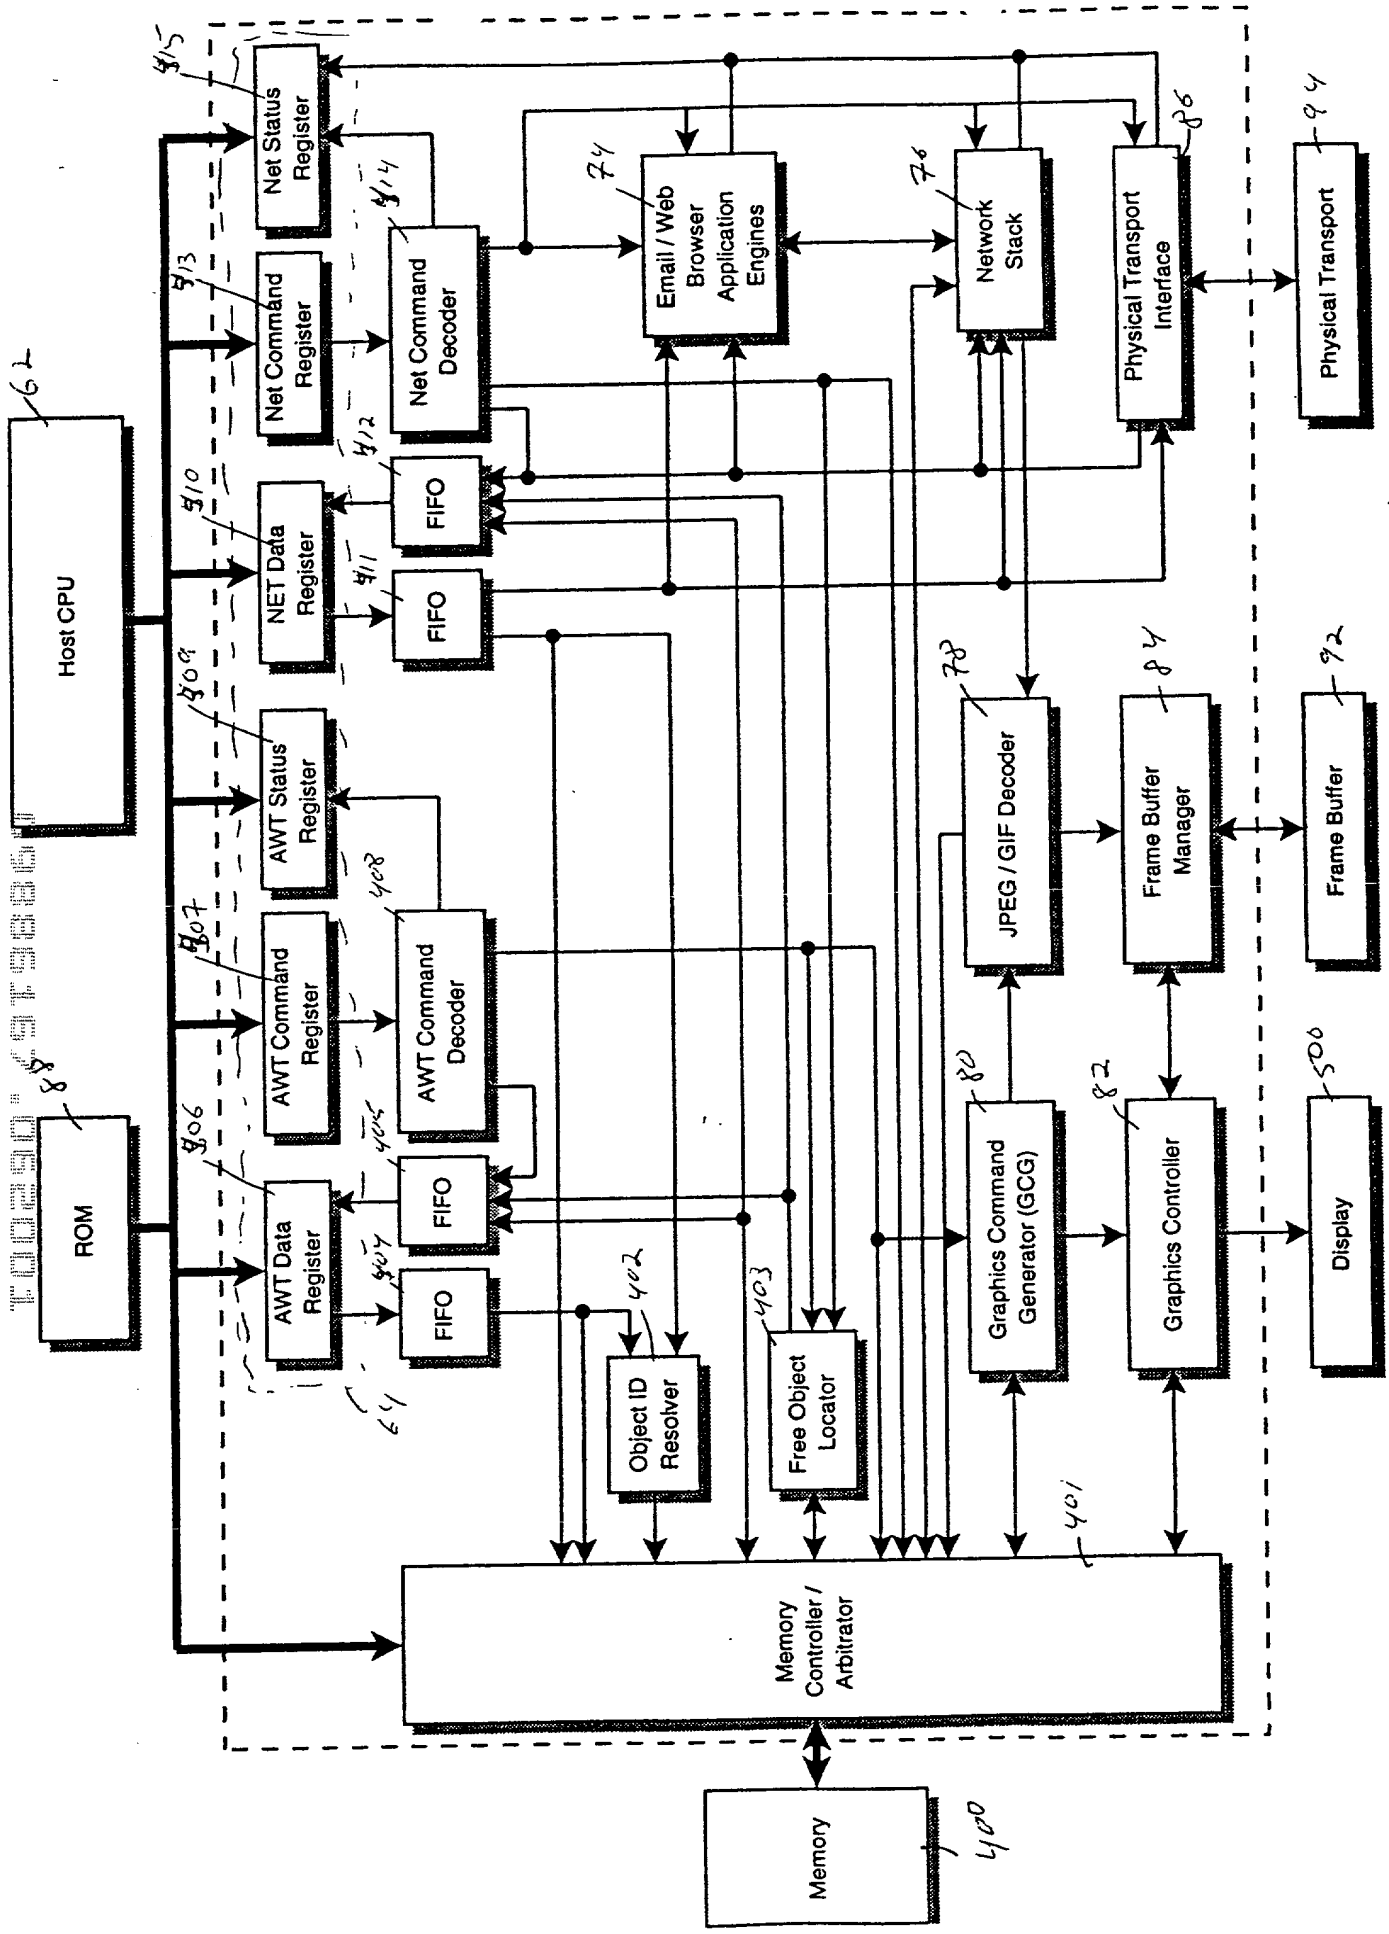

FIG. 2

Object List After Object Instantiations and Deletions					
Object #	Memory Block	In Use Flag	Object Type	Obj Link	
1	30 byte block	In Use	Frame		
2	30 byte block	In Use	GridLayout		
3	30 byte block	In Use	Container		
4	30 byte block	In Use	Component		
5	30 byte block	Free	n/a		
6	30 byte block	In Use	Component		
n	30 byte block	Free

The commands:

The result:

Fig. 14

Painting Methods:

clearRect	drawRect
clipRect	drawRoundRect
copyArea	fill3DRect
draw3DRect	fillArc
drawArc	fillOval
drawLine	fillPolygon
drawOval	fillRect
drawPolygon	fillRoundRect

Other Methods:

drawImage	setFont
drawString	setPaintMode
setColor	translate

Windowing/View System

General Graphics Controller

Creates Frames (i.e. windows)  
Creates Components (i.e. views)  
Passes image data to Image Renderer  
Passes text to Font Renderer  
Passes shapes to Polygon Renderer  
Allows selection (focus) for frames and components  
Deletes frames and components physically from display  
Traverses object hierarchy when a paint method in a view is called  
Handles mouse and keyboard events "passing" them down through a chain of frames and components

8

Window Manager

Draws windows using polygon draws in the Polygon Renderer  
Manages windows so they can overlap  
Determines frame that event occurred in and notifies appropriate layout manager instance that it may need to update  
Oversees container hierarchies within each frame

251

Layout Manager (belongs to / is referenced by a Frame)

Manages container hierarchies within a frame's scope  
Determines container that event occurred in and tells it to update if necessary

25

Component Manager (belongs to / is referenced by a LayoutManager/Container)

Manages component hierarchies within a container's scope  
Determines component that event occurred in and tells it to update if necessary

Fig 19

Network Controller

- Signals DNS queries
- Signals socket creation (allows multiple simultaneous sockets)
- Conducts Network Input and Output
- Signals closing of sockets
- Operates as an abstraction layer over TCP and UDP protocols
- May operate either synchronously or asynchronously

Network Query Mechanism

- Performs DNS lookups and reports result to the Network Controller

Socket Manager

- Manages sockets in use by applications (Opens and Closes them)
- Determines container that event occurred in and tells it to update if necessary
- Transfers socket status when requested up to the Network Controller

Stream Manager

- Shuttles character/stream based input and output over the TCP/IP or UDP link
- Offers a choice of input/output streams that differ for the application's use
- Transfers buffers when requested up to the Network Controller

FIG. 21
